Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Submitted (SEP-2003) to the EMBL/GenBank/DDBJ databases.
-!- SUBCELLULAR LOCATION: Integral membrane protein (By similarity).
-!- SUBCELLULAR LOCATION: Integral membrane protein (By similarity).
-!- SIMILARITY: Belongs to the G-protein coupled receptor I family.

```

TICE: This sequence may not be the entire insert of this clone. may be shorter because we only sequence overlapping sections e. or longer because we provide a small overlap between neighboring submissions.

email: submissions@watson.wustl.edu and jes@sanger.ac.uk

regions were double stranded, sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality = 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from This sequence was finished as follows unless otherwise noted: all more than one m13 subclone.

http://www.wormbase.org/db/seq/sequence?name=Y58G8A;class=Sequence For a graphical representation of this clone sequence and its analysis see:

NEIGHBORING CLONE INFORMATION

The 5' clone is R02C2, 3100 bp overlap; the 3' clone is F33E11, 200 bp overlap. Actual start of this clone is at base position 20847 of DC2; actual end is at 7365 of T22H9.

NOTES:

Coding seqences below are the result of integration and manual review of the following data: computer analysis using the program [Genefinder (P. Green and L. Hillier, personal communication), the large scale EST projects of Yuji Kohara (http://www.ddbj.nig.ac.jp/c-elegans/html/CE INDEX.html) and The C. elegans ORFsome cloning project (http://wrfdb.dfci.harvard.edu/), elmilarity to other proteins from BlastX analyses (http://blast.wustl.edu/), sequence conservation with C. briggsae using Jim Kent's WABA alignment program (Genome Research 10:1115-1125, 2000), individual C. elegans GenBank submissions, and personal communications with C. elegans researchers. tRNAs are predicted using the program tRNAscan-SE (Lowe, T.M. and Eddy, S.R., 1997, Nucl. Acids. Res., 25, 955-964).

It currently consists of 2 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Jobes Vector: paMP1 (Gibco); Site 1: Not1; Site 2: Sal1; The library was constructed by Brandi Chiapelli and Dr. James McCarter at Washington University, St. Louis. The CDNA was made by using Dynabead oligo-dr priming (Dynal). PCR based library using a modified protocol from the SNART PCR cDNA Synthesis Kit from Clontech. Directionally cloned into the Unge sites of pAMP1. Nematodes were provided by Dr. Warwick Grant of AgRearch, New Zealand (warwick.grant@agresearch.co.nz).
